Copter Camp

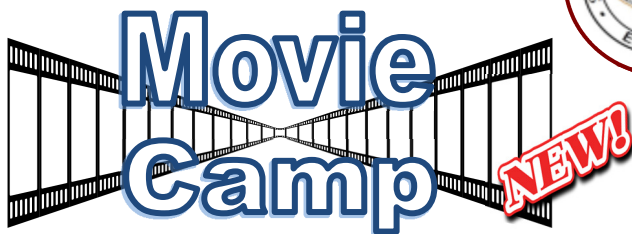

registration closed - more next summer!

Sure, quad-copter drones are a blast to fly, but they can also be a great way to study math and physics! We'll provide copters large and small that participants will use to accomplish a variety of challenges, and while the batteries recharge, we'll work out the math to study what just happened - and create a few Excel graphs along the way to show off our data! Class size is small, even for us, so sign up soon!

~~Tues, June 13~~ or Thurs, July 13

An entire day spent building and firing trebuchets and other catapults - what could be more fun?!? Both large and small, they can be difficult to master, but they offer quite the intellectual and creative challenge!

~~Thurs, June 29~~ or Tues, July 18

After a morning of filming using hand-held and copter cams, spend the rest of the day creating a film using SSM's digital film production and editing equipment. A great chance to learn the art of filmmaking and editing, not just the tech!

Thursday, July 20

A fusion of science and imagination! After a set of activities in our weCreate center to encourage and enhance each student's own creativity, participants will put those skills to the test in conquering a unique engineering challenge — build a roller coaster!
